

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

THE NORTHERN CALIFORNIA SECTION OF THE AMERICAN SOCIETY OF MAMMALOGISTS

The Northern California Section of the American Society of Mammalogists was started on January 8, 1920, when, at the suggestion of Dr. Joseph Grinnell, a meeting of persons interested in the study of mammals was held at the California Museum of Vertebrate Zoology in Berkeley. Organization was effected at that meeting and affiliation with the main Society was accomplished the following month. During the year 1920 nine meetings were held, there being a recess over the summer months when a number of the members were absent on field trips. The attendance has varied from five to fifteen but the degree of interest shown is far above that indicated by the attendance. Meetings of other scientific organizations in the San Francisco Bay region have made it impossible for all the local members to be present at each meeting of the section and absence on field trips has further interfered with attendance.

The field of interest has been quite wide although greater emphasis has been laid upon the life histories of mammals than upon any other one subject. The programs of the several meetings were as follows:

January 8, J. Grinnell, On kangaroo rats; J. Dixon, Trapping and trappers in central and southern California.

February 5, A. B. Howell, The California mastiff bat; Some Californian experiences with bat roosts (see this Journal, 1920, pp. 111-117; pp. 169-177).

March 4, Dane Coolidge, Collecting mammals in Italy and France in 1900.

April 1, J. Dixon, The golden beaver at Snelling, California.

May 6, Prof. C. A. Kofoid, Experiences with the wild mammals of southwestern British India.

August 26, Prof. J. S. Kingsley, Some reminiscences of vertebrate zoologists.

September 16, Symposium on the status of deer in the central coast counties of California.

October 28, "Book evening" at the University of California Library.

December 9, Dr. T. T. Waterman, Indian legends relating to western mammals.

One meeting during the year, that on September 16, was held in San Francisco, and one at the University Library, while the remainder were held at the Museum of Vertebrate Zoology. The greater part of the local membership resides in Berkeley and so most of the meetings are held there, but in fairness to those living in San Francisco one or more meetings each year will be held in that city. The first Thursday of each month has been chosen as the regular meeting night and this plan will not be changed except in special circumstances. The organization has been maintained in as simple a manner as possible, the conduct of the meetings is quite informal, and the only levy during the past year was for the printing of meeting notices.

Those in attendance during the past year feel that much good has resulted from the Section and we would strongly urge that members of the Society in other localities combine in like manner and establish their own Sections.

It is the desire of the Section that members of the Society at large from other parts of the country, when in the Bay region, will get in touch with the Section and attend its meetings.—TRACY I. STORER, SECRETARY, *Museum of Vertebrate Zoology, Berkeley, California.*
